PILE LIFT with re-piling unit **SHPA...**

Increase of productivity through networking of working processes

EUROCUTTER® Cutting Systems do not only make work easier, but also increase productivity.

Automatic lifting, lowering and automatic loading

Pile lifts and loading units reduce physical labour. The cutting material is lifted quickly and automatically to the optimal working height, and then transferred to the High Speed Cutter or from the cutter or other peripheral equipment to guarantee a precise restacking result. Operator bending is eliminated with an enormous increase of productivity.

Characteristic features SHPA...

Movable with rolls without load

Electrohydraulic automatic lifting/lowering

Eliminating operator fatigue, ensuring continuous work at optimal working height due to adjustable photo-cell

Closed hydraulic drive system

long life, almost wear resistant

Quick palette change

due to high lowering speed

Automatic safety cut-off

Control unit left or right side

Different types

for different palette sizes and weights

Platform as standard

with bevelled front-edge

Re-piling unit with fixed backside plate as alignment-stop
and adjustable alignment-stop, to be usable on both sides

also to be used as standard pile lift

CE-Norm Safety Standard
